komen

The diagram shows a cross-section of a beach flag with several layers. From top to bottom, the layers are: a thin black line (margin line), a red line (beach flag frame), a thick black layer (black elastic), a white layer (white elastic), a thin grey layer (compressed tunnel), and a bottom layer (possibly overpressure). The top part of the flag is curved, while the bottom part is flat. Labels with leader lines point to these layers.
